

ASSA P600+

Raising the standards for a standard cylinder.

The ASSA P600+ is redefining what you can expect from a standard security cylinder. P600+ builds on the trusted legacy of the patented ASSA P600 platform, now extended with a new patent valid through 2036. This guarantees long-term key control—an essential feature for maintaining security and managing access in masterkeyed systems.

Fully tested to EN 1303:2015 and BS EN 1634-1 standards, the ASSA P600+ delivers proven performance backed by certification.

At the heart of the P600+ is a unique pin system: six upper and lower pins, with wing-guided bottom pins featuring a double-code design. This mechanism enhances both security and durability, making the P600+ ideal for environments where a standard cylinder is required but higher performance is expected.

Design

Designed for versatility, the ASSA P600+ supports a wide range of cylinder types, shapes, and functions—all within a single, unified solution. Its specially engineered profile structure, combined with the advanced bottom pin design, allows for the creation of complex Master Key Systems without compromising the integrity or security of the locking system.

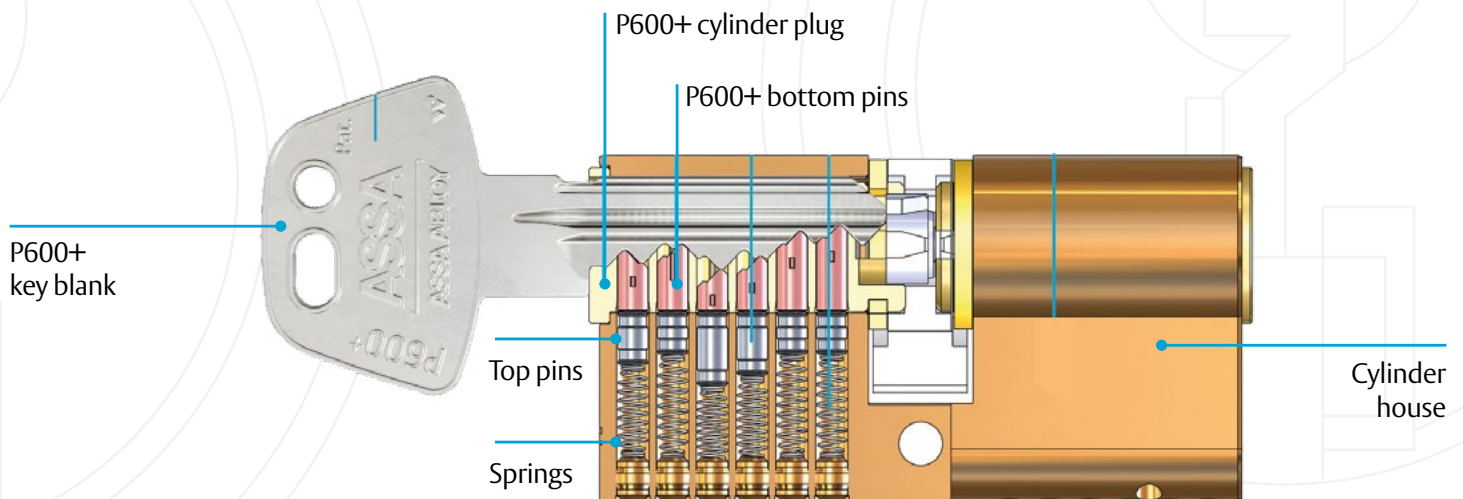

Security

Security is further reinforced through compatibility with approved security hardware. Both keys and cylinders are crafted to integrate seamlessly with certified components, ensuring a robust and reliable locking solution.

Whether you're upgrading an existing system or specifying a new one, the ASSA P600+ offers the perfect balance of innovation, security, and flexibility.

Patent Protection & Key Control

The ASSA P600+ platform is protected by a secure international patent valid until 2036, ensuring long-term security and peace of mind for customers. This patent protection plays a critical role in maintaining key control — a cornerstone of any secure locking system.

Since the removal of copyright protection for keys in August 1999, the only legal and effective way to protect key blanks is through up-to-date patents. ASSA ABLOY's patented systems ensure that keys are only available through authorised channels, making it virtually impossible for unauthorised third parties to duplicate or distribute them.

Why Patent Protection Matters

- **PREVENTS ILLEGAL DUPLICATION:** Only authorised security centres can supply keys and key blanks, eliminating the risk of unauthorised copies.
- **LEGAL SAFEGUARDS:** Patents are enforceable by law, offering stronger protection than copyright.
- **DEFENSIBLE IN COURT:** ASSA ABLOY actively defends its patents to protect customers and uphold the integrity of its systems.
- **EXCLUSIVE KEY CONTROL:** Patents allow ASSA ABLOY to manage key distribution securely, balancing convenience with high-level security.
